

cal improvements directly benefit the patient. The Audiologist benefits as well due to the fact that each hearing aid can be custom fitted for each patient's hearing loss. Just as each person has their own unique fingerprints, each hearing loss is unique to that individual.

Before digital hearing aid technology arrived onto the scene about seven years ago, analog technology was the norm for hearing aids. Analog hearing aids amplified all frequencies in the listener's surrounding environ-

improvement due to the enhancement of speech understanding in most difficult listening environments. There are patients who were previously told that they could not be fitted with a hearing aid due to their unique high-frequency hearing loss. Now, open-fit hearing aids can help those with high-frequency hearing loss. These are exciting times for Audiologists because we actually have patients that love their hearing aids!

If you have hearing loss and have

back signal before sending it to the receiver out to the ear. This reduces the incidence of annoying feedback.

ance accepted.

Now is the time to improve your hearing.
